

## Active BASS at its best

When DLS set out to develop an Active Subwoofer we first made extensive performance tests of the leading brand products with the focus to make our play deeper and more natural than all the rest. This completely goes along with the DLS philosophy – we play better! One of the key factors is our bass optimize control that allow you to tune the ACW10 for ultralow bass and the ultimate extra kick.

DLS ACW10 boast a super rigid profiled 10" driver with a full flow DLS grille in a sealed diecast aluminum enclosure with heat dissipation grooves for the built in 200 Watt RMS class D amplifier.

Now you can experience real bass performance even if the space is very limited, and you can fine tune the level by the remote EBC right from the dash!

Easy to connect by high level to any OEM stereo and with AutoStart or by RCA line level input, variable Lowpass filter and 0/180 phase switch.

### Specs:

- 10" Subwoofer
- Power: 200W RMS / MAX 450W
- Dimensions: 34.5 X 24.5 X 6.5 cm (L X W X H)
- Bass Optimize: 0-12dB
- Lowpass filter: 50-150Hz
- Phase Switch: 0 or 180 degrees
- PWM MOSFET Power Supply with Thermal Protection
- Adjustable Input Sensitivity
- EBC Remote Subwoofer Control included
- RCA and High-Level Inputs
- Soft Remote Turn On
- High-level AutoStart
- Subsonic filter
